------------------------------	----------

Your Tally data. Ready for business.

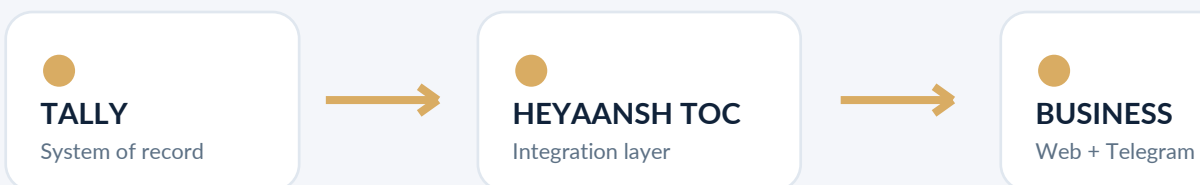

Turn Tally information into practical staff account enquiries, website RFQs and downloadable ledger statements.

TALLY ONLINE CONNECTOR

01 | THE IDEA

Tally stays at the centre. Your business moves faster.

TOC connects a configured, authorised Tally environment to the places your teams already work.

Connected operations without replacing your accounting platform.

1

Less back-and-forth

Staff can look up authorised party accounts from a familiar internal Telegram group.

2

More informed enquiries

Website RFQs can trigger an internal party account follow-up alongside product enquiries.

3

A reusable print format

Ledger PDFs follow the TOC print layout with voucher details, narration and inventory information where available.

02 | CAPABILITIES

Six practical ways TOC works.

Built from Heyaansh operating workflows; capabilities vary by company setup and verified data access.

01

Internal Telegram enquiries

Company staff send a recognised mobile number or an account command to obtain matched party details.

02

Receivable / payable position

A live Tally ledger closing balance is classified into business terms from the company perspective.

03

Financial-year ledger PDFs

TOC-format statements include vouchers, dates, narration and inventory details when available.

04

Website RFQ follow-ups

An eligible product enquiry can link the submitted customer mobile to internal accounting information.

05

Stock enquiry integration

Approved inventory data can support industrial stock and quotation workflows, subject to availability checks.

06

Company and ledger explorer

Private diagnostic and explorer tools help authorised users inspect Tally companies, masters and saved vouchers.

IMPORTANT DISTINCTION

Live closing balances and synchronized ledger PDFs use different data sources. Invoice-wise due dates and ageing are not verified TOC features.

03 | STAFF WORKFLOW

The account desk, inside Telegram.

A staff member can use the existing internal group without requesting an accountant to manually export the

INTERNAL TELEGRAM GROUP

EXAMPLE WORKFLOW

Staff
/account 9000000000

ASK HEYAANSH BOT

Party:Example Industrial Supplies

Position:Receivable / payable from live Tally

Ledger:Current financial-year PDF attached

FY_Party_Ledger.pdf

1

Send a number

Staff enter a mobile number or /account command.

2

Find the party

TOC matches configured company ledger contacts.

3

Read the result

The group receives balances and available FY PDFs.

Example is illustrative. The group must be configured for bot access; private accounting information remains within authorised company workflows.

04 | WEBSITE WORKFLOW

Connect a product enquiry to an account.

01

WEBSITE

Name, mobile and product RFQ

02

STOCK / RFQ

Product details and indicative stock

03

INTERNAL GROUP

Enquiry delivered to staff

04

TOC + TALLY

Matched ledger and report

Operational note: The available website stock indicator is not a guaranteed selling quantity. Stock, prices and all financial reports should be confirmed before external commitment.

05 | DEPLOYMENT

Let us connect your workflows.

A practical TOC implementation begins with your Tally environment, permissions, business processes and internal access rules.

01 Company-specific setup

Each connection must be scoped to the intended company, environment and authorised users.

02 Data quality matters

Mobile-to-ledger matching, synchronized voucher coverage and financial output require validation.

03 Existing Tally retained

TOC complements Tally as a system of record; it is not an accounting replacement.

This brochure describes implemented examples and potential integration patterns, not a guarantee of availability in every deployment. Closing balances are not equivalent to invoice-wise overdue balances. Financial-year PDFs may rely on saved voucher snapshots that require reconciliation.
